

Eligibility Determination

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

Student Information

Student:	Caleb Nguyen
Date of Birth:	2016-03-09
Grade:	2
School:	Synthetic Elementary School
District:	Synthetic District

Meeting / Determination Information

Determination Date:	2023-10-12
Determination Type:	Eligibility Determination
Determination By:	Eligibility team

This document records an educational eligibility determination. It is not a medical diagnosis.

Information Reviewed

- ☒ Teacher information regarding classroom reading performance
- ☒ Review of existing educational records
- ☒ Classroom work samples related to connected-text reading
- ☐ Later reevaluation results

Summary of Relevant Evidence

Classroom information documents a persistent reading fluency concern. Caleb has difficulty reading connected grade-level text at an expected rate. Connected-text reading is slow and effortful during classroom reading tasks. Isolated word reading appears stronger than reading of connected passages.

Available educational information indicates that general reasoning and cognitive functioning are broadly within the expected range for age. A global cognitive limitation is not identified as the primary explanation for the reading concern.

Eligibility Determination

- ☒ Eligible for special education
- ☐ Not eligible for special education

Eligibility Category:	Specific Learning Disability (SLD) - Reading
Primary Educational Need:	Reading Fluency

Eligible for special education. This is an educational eligibility determination, not a medical diagnosis. Eligibility category: Specific Learning Disability (SLD) - Reading. Primary educational need: Reading Fluency.

Educational Need for Specially Designed Instruction

The team determined that Caleb requires specially designed instruction targeting the documented reading fluency need.

Team Conclusion

Teacher information and classroom performance document a persistent difficulty reading connected grade-level text at an expected rate. Existing evaluation information indicates that general reasoning is broadly within the expected range for age. A global cognitive limitation is not identified as the primary explanation. The team determined that Caleb requires specially designed instruction to address the documented reading-fluency need.
