

Speech-Language Review

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

Student Information

Student:	Jordan Lee
Date of Birth:	2015-10-21
Grade:	5
School:	Synthetic Elementary School
District:	Synthetic District
Review Date:	2026-03-11
Evaluator:	Speech-language pathologist

Reason for Review

This speech-language review was completed on 2026-03-11 as part of the reevaluation scope identified in the reevaluation plan. The purpose is to determine whether a separate speech-language educational need is present and whether direct speech-language services are recommended. The review for Jordan Lee is limited to the speech-language domain.

Conversational speech was intelligible to an unfamiliar listener throughout the review.

Jordan greeted the examiner, answered conversational questions, and produced connected speech that remained understandable when the listener was not a familiar classroom adult. Intelligibility in conversation is not a finding about following lengthy directions in noise.

Oral Directions

Direction-following was sampled in more than one format. The sentences below record different conditions and must not be reduced to a single unqualified statement that oral directions are followed accurately.

Jordan followed two-step oral directions accurately in a quiet one-to-one setting.

The quiet one-to-one sample used two-step directions only. It does not describe whole-group instruction, competing noise, or lengthy multistep classroom routines for Jordan.

Accuracy decreased when directions contained three or more steps and were presented only once.

A neighboring practice item used a familiar one-step classroom phrase and was completed accurately. That practice item is not the three-or-more step finding recorded above.

Classroom Report and Structured Language Tasks

Teacher description and structured language tasks are recorded separately. Teacher report is not an evaluator observation of whole-group instruction, and structured-task performance is not a classroom observation.

The classroom teacher described the greatest difficulty during whole-group instruction when directions were lengthy and competing noise was present.

The teacher description is limited to whole-group instruction when directions were lengthy and competing noise was present. It does not state that Jordan cannot follow directions, and it does not contradict accurate two-step performance in a quiet one-to-one setting.

On structured language tasks, receptive and expressive language performance fell within the expected range.

The phrase describing expected-range performance on structured language tasks is specific to those tasks. It is not a global statement about all communication-related educational needs.

Interpretation and Recommendations

Conversational speech was intelligible to an unfamiliar listener throughout the review. Jordan followed two-step oral directions accurately in a quiet one-to-one setting. Accuracy decreased when directions contained three or more steps and were presented only once. On structured language tasks, receptive and expressive language performance fell within the expected range.

A speech-language review does not determine special education eligibility and does not, by itself, assign IEP accommodations.

The review does not recommend direct speech-language services at this time.

Not recommending direct speech-language services is not a finding that Jordan has no communication-related educational needs. Classroom direction-following remains an educational issue described elsewhere in this review.

The evaluator recommends classroom strategies that shorten lengthy oral directions and provide a written reference when possible.

Classroom strategy recommendations are not current IEP services. They are not evidence that written directions and shortened oral directions are already provided in the operative IEP on the review date.

The review does not recommend direct speech-language services at this time. The evaluator recommends classroom strategies that shorten lengthy oral directions and provide a written reference when possible.

This report does not determine special education eligibility.
