

Behavior Incident / Data Summary

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

Record Header

Student:	Jordan Ellis
Date of Birth:	2013-06-12
Grade:	6
School:	Synthetic Middle School
District:	Synthetic District
Document Date:	2025-10-07
Document Type:	Behavior incident summary
Prepared By:	Classroom team (synthetic)

This summary describes observation data collected for Jordan Ellis from 2025-09-08 through 2025-10-03. It summarizes the observation period. It does not determine the function of behavior and is not a Functional Behavior Assessment.

Target Behavior Reviewed

The target behavior is task refusal / disengagement.

After an independent written task is presented, Jordan puts materials aside, verbally refuses, puts head down, or leaves the assigned work area for at least 30 seconds without beginning the requested task.

Physical aggression was not observed.

Suspension was discussed as an example of a possible administrative response; no suspension was issued during the observation period.

Summary Table

Measure	Value
Observation window	2025-09-08 through 2025-10-03
Instructional weeks observed	4 (four instructional weeks)
Total task-refusal episodes	17
Average frequency	4.25 episodes per week
Independent written language arts	13 episodes
Independent written social studies	3 episodes
Other (science lab write-up)	1 episode
Small-group mathematics sample	no observed task refusal

Total task-refusal episodes: 17

Instructional weeks observed: 4. Average: 4.25 episodes per week.

Narrative Summary

Staff collected data because Jordan increasingly avoided difficult independent written assignments. The strongest association was with independent written tasks. Most recorded episodes followed presentation of independent written language-arts work. A smaller number followed independent written social-studies tasks. One episode occurred during an independent science lab write-up.

No task-refusal episodes were observed during three small-group mathematics observations.

The difference between independent written work and small-group mathematics is a context difference. Both descriptions may be true at the same time. This summary does not treat the settings as a contradiction and does not assign a function to the behavior.

Adult responses during the period included prompting, restating the task, and redirection. Jordan resumed the assigned work after some episodes and did not resume after others. This variation is recorded in the tracking log and is not collapsed into a single outcome.

What This Summary Does Not Do

- This summary does not state a hypothesized function.
- This summary does not create a Behavior Intervention Plan.
- This summary does not change the IEP.
- This summary does not report a medical diagnosis.
