

Behavior Intervention Plan

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

Plan Identification

Student:	Jordan Ellis
Date of Birth:	2013-06-12
Grade:	6
School:	Synthetic Middle School
District:	Synthetic District
Plan Date:	2025-11-03
Document Type:	Behavior Intervention Plan
Linked Assessment:	Functional Behavior Assessment dated 2025-10-24

This Behavior Intervention Plan describes what staff intend to do to support Jordan Ellis. It responds to the FBA hypothesized function of escape or avoidance of difficult independent written work. Listing a strategy does not prove that the strategy is effective. This plan is not evidence of student outcome.

Target Behavior

Target behavior: task refusal / disengagement.

Observational baseline frequency remains 4.25 episodes per week.

Prevention Strategies

- ☒ chunk long written assignments
- ☒ provide a visual task checklist
- ☒ offer choice between two equivalent task-start options
- ☒ pre-correct before independent written assignments
- ☐ remove independent written work from the curriculum

assignment chunking for extended independent written tasks is a prevention strategy in this plan.

These prevention strategies are planned antecedent supports. They are not measured outcomes.

Replacement Behavior

Jordan will appropriately request assistance or a brief break instead of refusing or leaving the assigned work area.

Replacement behavior tool: help/break card. The help/break card is a communication tool. It is not service minutes and is not a related-service allocation.

Teaching Strategies

- Teach Jordan when and how to present the help/break card.
- Model a brief, appropriate help request before independent written work.
- Practice the replacement behavior during non-crisis instructional times.

Reinforcement

specific positive feedback for task initiation and appropriate help/break requests

Reinforcement is described as an intended staff practice. This plan does not report that reinforcement has already changed behavior.

Adult Response

- [X] brief neutral redirection
- [X] review task checklist
- [X] prompt replacement behavior
- [X] avoid extended verbal negotiation

Progress Monitoring

Measure A and Measure B are separate constructs. They must not be merged into one numeric series.

Measure	Construct	Baseline	Unit
Measure A - behavior frequency	task-refusal episodes per instructional week	4.25 episodes per week	episodes per week
Measure B - task initiation	percentage of sampled independent written tasks begun within 2 minutes	approximately 52%	percent

Task-initiation baseline is approximately 52%. This percentage is not the same measurement as 4.25 episodes per week.

Review Schedule

Progress will be reviewed at least once each grading period and at the next IEP meeting. Implementation of this plan is intended; effectiveness is not established by the existence of this document.

Staff Responsibilities

The special education teacher will teach the replacement help/break request and will provide the visual task checklist before independent written assignments. The general education teacher will pre-correct and will use brief neutral redirection. Behavior consultation, if added to the IEP, is a service. The help/break card remains a tool, not service minutes.

This plan does not change eligibility, specialized reading frequency, specialized reading session length, or extended time. Those IEP provisions, if later amended, must be amended in the IEP itself.

Adults will avoid treating a listed strategy as evidence that the intervention has already succeeded. Outcome evidence, if any, will appear in a later progress report.
