

# Behavior Progress Report

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

## Student / Report Information

|                   |                               |
|-------------------|-------------------------------|
| Student:          | Jordan Ellis                  |
| Date of Birth:    | 2013-06-12                    |
| Grade:            | 6                             |
| School:           | Synthetic Middle School       |
| District:         | Synthetic District            |
| Report Date:      | 2026-01-30                    |
| Document Type:    | Behavior progress report      |
| Reporting Period: | 2025-11-14 through 2026-01-30 |

This progress report provides post-BIP data for Jordan Ellis. Behavior frequency and task initiation are reported separately. They are unlike measurements and are not one numeric sequence.

## IEP Behavior Goal

Jordan will reduce task-refusal behavior to 1 or fewer episodes per instructional week for four consecutive instructional weeks.

Jordan will reduce task-refusal behavior to 1 or fewer episodes per instructional week for four consecutive instructional weeks.

|                                |                                            |
|--------------------------------|--------------------------------------------|
| Goal baseline<br>(historical): | 4.25 episodes per week                     |
| Goal target:                   | 1 or fewer episodes per instructional week |
| Mastery criterion:             | four consecutive instructional weeks       |

## Measure A - Behavior Frequency

| Timepoint                | Task-refusal frequency | Unit              |
|--------------------------|------------------------|-------------------|
| FBA / amendment baseline | 4.25 episodes per week | episodes per week |
| Current progress         | 2.0 episodes per week  | episodes per week |

Task-refusal frequency is 2.0 episodes per week. Compared with the earlier baseline of 4.25 episodes per week, this is chronological progress. These two values are not contradictory.

## Measure B - Task Initiation

| Timepoint        | Task initiation within 2 minutes | Unit    |
|------------------|----------------------------------|---------|
| BIP baseline     | approximately 52%                | percent |
| Current progress | 78%                              | percent |

Task initiation within 2 minutes is 78%. Compared with the BIP baseline of approximately 52%, this is chronological progress on a separate construct.

## Interpretation

---

Improvement documented on both measures. The IEP goal requires 1 or fewer episodes per instructional week for four consecutive instructional weeks. That criterion has not yet been demonstrated. Status: goal criterion not yet demonstrated.

Jordan has not met the goal. This report does not label the result as failure and does not describe a legal problem. Improvement is documented; the target has not been reached.

## Implementation Notes

---

During sampled sessions, staff implementation fidelity = 85%. Staff implementation fidelity is not student performance. 85% is not a student score.

Do not combine 4.25 episodes per week, 52%, 2.0 episodes per week, and 78% into one series. Frequency and percentage remain separate constructs.
