

Eligibility Determination

SYNTHETIC DEVELOPMENT RECORD — NOT A REAL STUDENT

Student Information

Student:	Maya Carter
Date of Birth:	2017-04-18
Grade:	2
School:	Synthetic Elementary School
District:	Synthetic District

Meeting / Determination Information

Determination Date:	2024-11-01
Determination Type:	Initial Eligibility Determination
Determination By:	Eligibility team

This document records an educational eligibility determination. It is not a medical diagnosis.

Evaluation Evidence Reviewed

- [X] Psychoeducational Evaluation - 2024-10-15
- [X] Academic Evaluation - 2024-10-18
- [X] Speech-Language Evaluation - 2024-10-22

Summary of Relevant Evidence

Teacher information documents a persistent classroom reading fluency concern. Academic evaluation results include oral reading fluency of 42 WCPM and oral reading accuracy of 86%. Reading comprehension during grade-level text tasks is below expected classroom level. Connected-text reading is slow and effortful, with frequent pauses.

Psychoeducational evidence indicates general reasoning and cognitive functioning are broadly within the expected range for age. A global cognitive limitation is not identified as the primary explanation. No separate speech-language educational need is identified from this evaluation.

Eligibility Determination

- [X] Eligible for special education
- [] Not eligible for special education

Eligibility Category:	Specific Learning Disability (SLD) - Reading
Primary Educational Need:	Reading Fluency

Eligible for special education. This is an educational eligibility determination, not a medical diagnosis. Eligibility category: Specific Learning Disability (SLD) - Reading. Primary educational need: Reading Fluency.

Educational Need for Specially Designed Instruction

The team determined that Maya requires specially designed instruction targeting the documented reading fluency need.

Team Conclusion

Teacher information and the referral document a persistent classroom difficulty reading connected grade-level text accurately and fluently. The academic evaluation documents oral reading fluency of 42 WCPM and oral reading accuracy of 86 percent, with reading comprehension during grade-level text tasks below expected classroom level. Connected-text reading is slow and effortful, with frequent pauses. Psychoeducational evidence indicates general reasoning and cognitive functioning are broadly within the expected range for age, and a global cognitive limitation is not identified as the primary explanation. The speech-language evaluation identifies no separate speech-language educational need and does not recommend a speech-language service. The team determined that Maya requires specially designed instruction to address the documented reading-fluency need.
